Address
Ibb, Al Dihar - Yemen

Education

2020
Bachelor of Computer Science
Malaysian University of Sana'a, Yemen
GPA: Very Good

Expertise

- PHP/Laravel
- Vue.js/React.js
- Javascript/Typescript
- Html/Css - Tailwindcss
- DevOps: Linux/Nginx/servers
- Git/Github

Language

Arabic - Native

Engilsh - in progress

Experience

2023
special team
Backend Developer

I am currently working on the book fair project for the General Authority for Books in Hadhramaut. 70% of the project has been completed, except for the admin control panel. Laravel, Vue.js, Tailwind CSS, and PrimeVue have been used for the development of the project.

2020 - 2022
Team NMSH
Full Stack web developer

I have worked with this team on an API project where we utilized Lumen, MySQL, Linux, and Nginx as the technology stack. For security, we implemented HAMC for message signing. On the frontend, we utilized Bootstrap and Alpine.js.

2019 - 2023
my own account
Full Stack

Throughout years of continuous self-learning, I have worked on projects for my own account. These projects have been a significant source of learning for me. Among the noteworthy projects are:
1. Automatic E-commerce Store Creation Project: This project involved creating an e-commerce store with just a click of a button, without the need for technical coding. The technologies used in this project were Laravel, MySQL, Vue.js, and Tailwind CSS.
2. Multi-Vendor Store Project: In this project, I worked on developing the API for a multi-vendor store. The same technologies as mentioned before were utilized, but React was used for the frontend along with TypeScript.

These projects have allowed me to gain extensive knowledge and experience while applying various technologies.
